

Temporary Heat When and Where You Need It

Since 1965, Thermalay heated blankets have provided heat when and where contractors need it. Thermalay blankets have been proven across the northern United States, Canada and Alaska.

Thermalay blankets are the clear choice for concrete and masonry finishers, roofers, and highway and bridge builders. Because they reduce curing time from 24 to 7 days, Thermalay blankets make it easy for you to reduce downtime and keep people on the job — even during the coldest winter weather — while saving time, money and labor in the process.

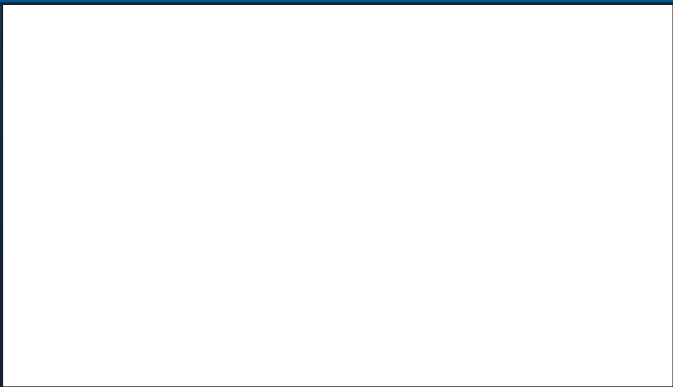

The Thermalay heated blanket is the only fully customizable heated pad in the market. Need a special size or shape, or have an unusual application that calls for a special fit? Let us know and we'll help you design just the right solution.

- Reinforced PVC, top & bottom
- Waterproof seals on all four edges
- Insulated with 1/4" microfiber
- Grommets every 5 feet
- 6' cord, no plug end
- Reliable, easily handled
- 28 day curing strength in 7 days
- Eliminate schedule delays
- Economical and safe
- No open flames

Standard Sizes	Voltage	Amperage	Weight	Cost
9' x 15'	110v or 220v	19 or 12 amp	~ 39 lbs	_____
4.5' x 30'	110v or 220v	19 or 12 amp	~ 39 lbs	_____
9' x 9'	110v only	10 amp	~ 24 lbs	_____
4.5' x 15'	110v only	8 amp	~ 20 lbs	_____
6' x 25'	110v only	17.6 amp	~ 39 lbs	_____
9' x 27'	220v only	20 amp	~ 85 lbs	_____
55 gal. drum	110v only	3 amp	~ 12 lbs	_____

No thermostat required: temperature under pad: 50 °F to 60 °F above ambient air temperature.
